

LIPO-CERAVIT C

Ceramide encapsulated Vitamin C

INCI NAME:

GLYCERIN, ASCORBYL
TETRAISOPALMITATE, CERAMIDES,
PENTYLENE GLYCOL

DOSE OF USE:

FROM 0.5% to 3%

SOLUBILITY:

LIPO-SOLUBLE & HYDRODISPERSIBLE.

PRESERVATIVES:

NONE

TOLERANCE:

EXCELLENT

SKIN BENEFITS:

- Stimulation of skin's own collagen production
- Free radical scavenger – **antioxidant**
- Reduces hyper-pigmentation: **inhibition** of excess **melanin**
- Reinforces **barrier function**
- Reduces TEWL

DESCRIPTION:

LIPO-CERAVIT C consists primarily in Glycoceramides and Ascorbyl Tetraispalmitate and is characterized by its exceptional galenic form: nanoscopic liposomes (100µm). This has been achieved by using a special unique technique (no surfactants) and it is able to have an increased efficacy on the skin. Thanks to the bio-affinity of the liposome membrane and the membrane of the skin cells, the vitamin C is effectively delivered where it is needed. The **LIPO-CERAVIT C** particle size provides a high penetration of the active in the skin.

With this active ingredient, it is possible to have a highly concentrated dose of oil soluble vitamin C, microencapsulated in a ceramide nano-liposome.

The outstanding penetration of Vitamin C and the bio availability of the Ceramides in the skin have never being achieved before.

PROPERTIES:

At **LIPO-CERAVIT C** we have associated 2 effective active ingredients in a nanoscopic size liposome:

- Oil soluble Vitamin C ($\pm 20.00\%$)
- Glycoceramides ($\pm 4.00\%$)

Each one plays an important role in skin treatments:

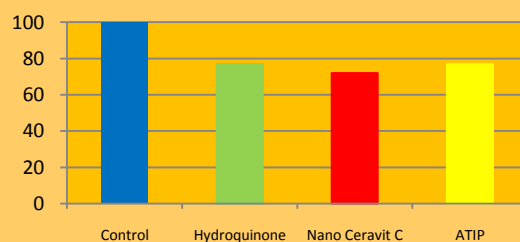

- 1. Vitamin C:** has many claims as cosmetic ingredient: It has been clinically proven that Vitamin C can stimulate collagen production by the skin, is a Free-Radical scavenger that has a major anti-oxidation effect and it can also reduce hyper-pigmentation and age spots in the skin as it can inhibit formation of excess melanin
- 2. Glycoceramides:** Ceramides are of most importance to maintain a good barrier function at the stratum corneum. They reinforce, maintain and restore the lipidic layers and perform as cement for the skin corneocytes

ANTI FREE-RADICAL SCAVENGER

MELANIN INHIBITION
